Test Strategy 17

Design Styles — Greenfield Local Hub

Font Family = "Montserrat"

Light Mode

Background

- **Body —** `#faf9f7` main page background warm off-white, softer than pure white

Font

- **Normal —** `#2d3419` Main body text and headings — dark olive for warmth
- **Lighter —** `#6b7254` Secondary text, captions and metadata

Interactive

- **Normal —** `#4a7c59` Links, active nav items and icon fills
- **Hover / Selected —** `#3d6b4a` Darker green applied on hover and focus states

Dark Mode

Background

- **Body —** `#1a1f12` Deep forest tone easier on the eye than pure black
- **Foreground Elements —** `#252d1a` Dark olive cards, distinguishable from page background

Font

- **Normal —** `#f5f2ed` Warm white strong contrast on dark backgrounds
- **Lighter —** `#b8ad97` Muted tone for secondary text in dark mode

Interactive

- **Normal —** `#9db88f` Sage green replaces forest green in dark mode for contrast
- **Hover / Selected —** `#4a7c59` Returns to forest green on hover for consistency

Buttons / Cards

Corner Radius: Rounded — 6px (buttons), 10px (cards)

Primary Button: Background #4a7c59, text #ffffff, no outline

Secondary Button: Background transparent, border 1px #e8e4dc, text #2d3419

Card Background: #ffffff (light) / #252d1a (dark)

Card Border: 1px solid rgba(77, 90, 50, 0.15)

Card Shadow: None — flat design for clean aesthetic

Accent Colours

- **Discounts / Special Offers —** `#c44536` Terracotta red used for discount badges and offer tags
- **Success / Confirmation —** `#4a7c59` Forest green used for success messages and confirmations
- **Warnings —** `#b8860b` Amber — used for scheduled/pending order statuses
- **Errors / Destructive —** `#c44536` Used for form validation errors and remove actions
- **Muted / Borders —** `#e8e4dc` Warm grey dividers, input borders and muted backgrounds

Typography Scale

H1 — Hero Title: Montserrat, 48px, Medium (500), #2d3419

H2 — Section Heading: Montserrat, 32px, Medium (500), #2d3419

H3 — Card / Page Heading: Montserrat, 24px, Medium (500), #2d3419

H4 — Sub Label: Montserrat, 18px, Medium (500), #2d3419

Body: Montserrat, 16px, Regular (400), #2d3419

Secondary / Caption: Montserrat, 14px, Regular (400), #6b7254

Small / Label: Montserrat, 12px, Regular (400), #6b7254

Button: Montserrat, 14px, Medium (500), #ffffff or #2d3419

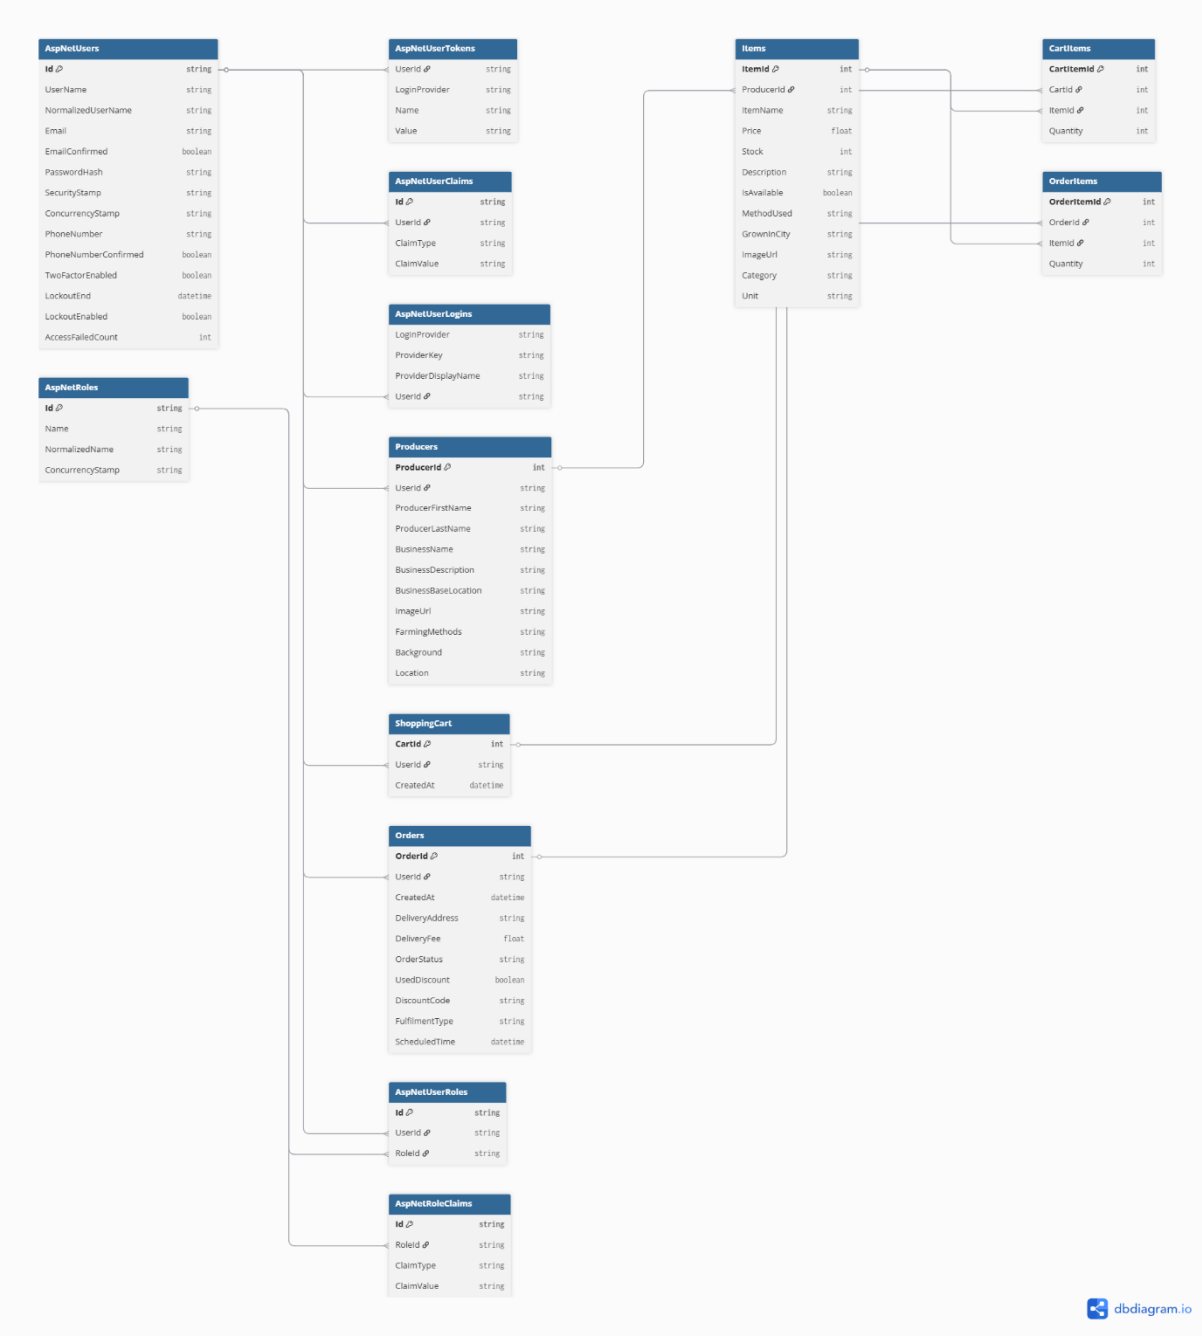
Database Design



Data Dictionary

AspNetUsers

Column	Data Type	Required	Default	Validation	Primary/Foreign
Id	string	Yes	Autogenerated	Max 256 characters	Primary
UserName	String	Yes		Uppercase of username	

NormalizedUserName	String	Yes		Must be valid email format	
Email	String	Yes			
EmailConfirmed	Boolean	Yes	false	Min 8 characters , must contain letter, number and special character	
PasswordHash	String	Yes		Auto generated	
SecurityStamp	String	Yes		Auto generated	
ConcurrencyStamp	String	Yes		Must contain valid numeric digits in correct format	
PhoneNumber	string	No			
PhonenumberConfirmed	Boolean	Yes	False		
TwoFactorEnabled	Boolean	Yes	False		
LockoutEnd	Datetime	No			
LockoutEnabled	Boolean	Yes	False		
AccessFailedCount	int	yes	0		

AspNetUserTokens

Column	**Data Type**	**Required**	**Default**	**Validation**	**Primary/Foreign**
UserId	String	Yes		Must exist in AspNetUsers	Foreign
LoginProvider	String	Yes			
Name	String	Yes			
Value	String	No			

AspNetUserClaims

Column	Data Type	Required	Default	Validation	Primary/Foreign
Id	String	Yes	Auto-generated		Primary
UserId	String	Yes		Must exist in AspNetUsers	Foreign
ClaimType	String	No			
ClaimValue	String	No			

AspNetUserRoles

Column	Data Type	Required	Default	Validation	Primary/Foreign
Id	String	Yes	Auto-generated		Primary
UserId	String	Yes		Must exist in AspNetUsers	Foreign
RoleId	String	Yes		Must exist in AspNetRoles	Foreign

AspNetUserLogins

Column	Data Type	Required	Default	Validation	Primary/Foreign
LoginProvider	String	Yes			Primary
ProviderKey	String	Yes			
ProviderDisplayName	String	No			
UserId	String	Yes		Must exist in AspNetUsers	Foreign

AspNetRoles

Column	Data Type	Required	Default	Validation	Primary/Foreign
Id	String	Yes	Auto-generated GUID		Primary
Name	String	Yes			
NormalizedName	String	Yes		Uppercase of Name	
ConcurrencyStamp	String	No	Auto-generated		

AspNetRoleClaims

Column	Data Type	Required	Default	Validation	Primary/Foreign
Id	String	Yes	Auto-generated		Primary
RoleId	String	Yes		Must exist in AspNetRoles	Foreign
ClaimType	String	No			
ClaimValue	String	No			

Producers

Column	Data Type	Required	Default	Validation	Primary/Foreign
ProducerId	Int	Yes	Auto-incremented		Primary
UserId	String	Yes		Must exist in AspNetUsers	Foreign
ProducerFirstName	String	Yes		Max 100 characters	
ProducerLastName	String	Yes		Max 100 characters	

BusinessName	String	Yes		Max 150 characters	
BusinessDescription	String	No		Max 1000 characters	
BusinessBaseLocation	String	No		Max 200 characters	
ImageUrl	String	No		Must be valid URL format	
FarmingMethods	String	No		Max 2000 characters	
Background	String	No		Max 2000 characters	
Location	String	No		Max 200 characters	

Items

Column	**Data Type**	**Required**	**Default**	**Validation**	**Primary/Foreign**
ItemId	Int	Yes	Auto-incremented		Primary
ProducerId	Int	Yes		Must exist in Producers	Foreign
ItemName	String	Yes		Max 150 characters	
Price	Float	Yes		Must be greater than 0	
Stock	Int	Yes	0	Must be 0 or greater	
Description	String	No		Max 1000 characters	
IsAvailable	Boolean	Yes	true		
MethodUsed	String	No		Max 500 characters	
GrownInCity	String	No		Max 100 characters	
ImageUrl	String	No		Must be valid URL format	

Category	String	Yes		Must be Vegetables, Dairy, Fruit, Pantry or Eggs	
Unit	String	Yes		e.g. kg, dozen, bunch, 250g	

ShoppingCart

Column	Data Type	Required	Default	Validation	Primary/Foreign
CartId	Int	Yes	Auto-incremented		Primary
UserId	String	Yes		Must exist in AspNetUsers	Foreign
CreatedAt	DateTime	Yes	Current datetime		

CartItems

Column	Data Type	Required	Default	Validation	Primary/Foreign
CartItemId	Int	Yes	Auto-incremented		Primary
CartId	Int	Yes		Must exist in ShoppingCart	Foreign
ItemId	Int	Yes		Must exist in Items	Foreign
Quantity	Int	Yes	1	Must be greater than 0	

Orders

Column	Data Type	Required	Default	Validation	Primary/Foreign
OrderId	Int	Yes	Auto-incremented		Primary
UserId	String	Yes		Must exist in AspNetUsers	Foreign

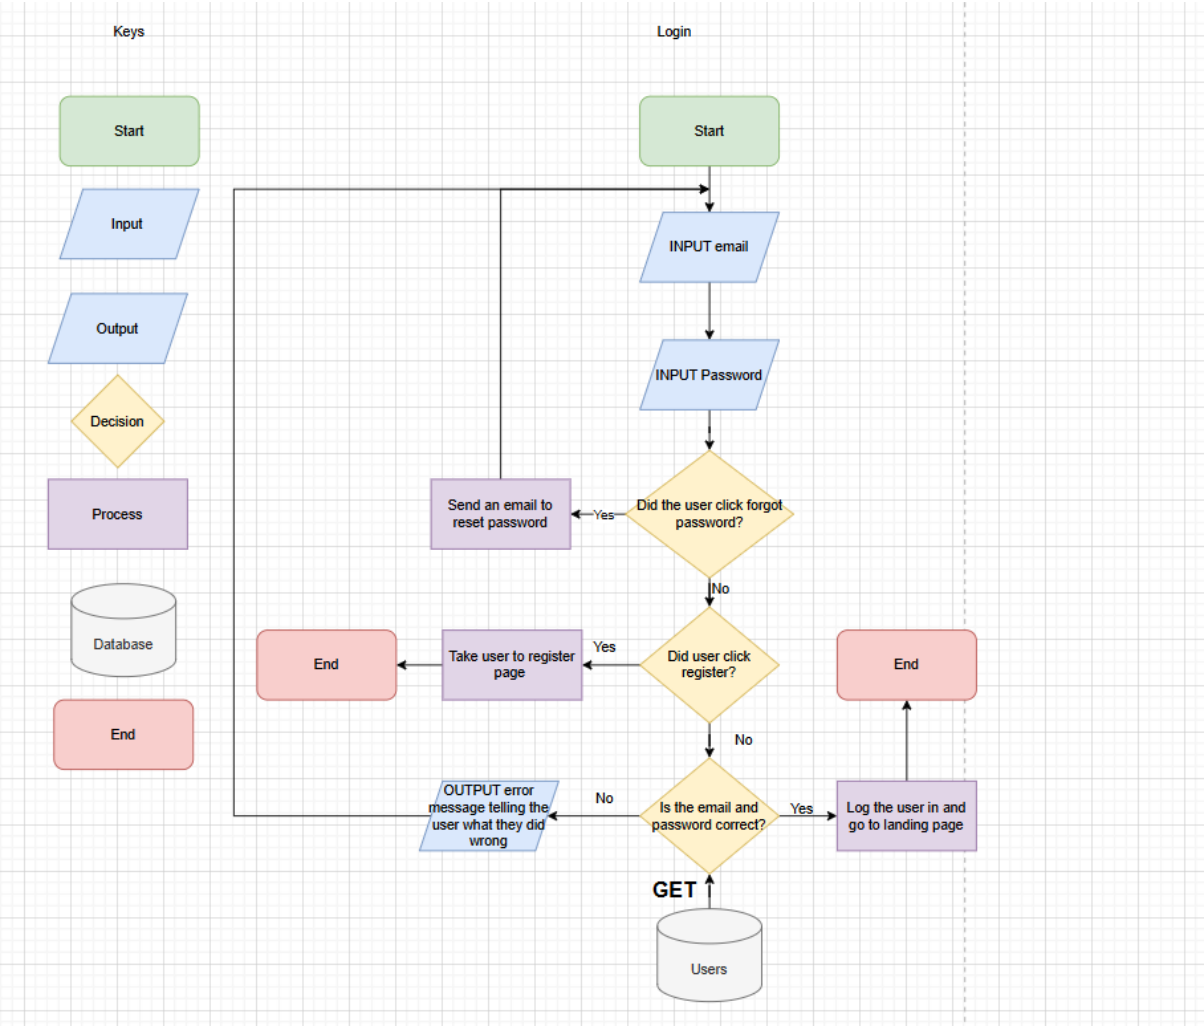
CreatedAt	DateTime	Yes	Current datetime		
DeliveryAddress	String	No		Required if FulfilmentType is Delivery	
DeliveryFee	Float	Yes	0	Must be 0 or greater	
OrderStatus	String	Yes	Processing	Must be Processing, Scheduled, Ready, Delivered or Completed	
UsedDiscount	Boolean	Yes	false		
DiscountCode	String	No			
FulfilmentType	String	Yes		Must be Collection or Delivery	
ScheduledTime	DateTime	Yes		Must be a future date	

OrderItems

Column	**Data Type**	**Required**	**Default**	**Validation**	**Primary/Foreign**
OrderItemId	Int	Yes	Auto-incremented		Primary
OrderId	Int	Yes		Must exist in Orders	Foreign
ItemId	Int	Yes		Must exist in Items	Foreign
Quantity	Int	Yes		Must be greater than 0	

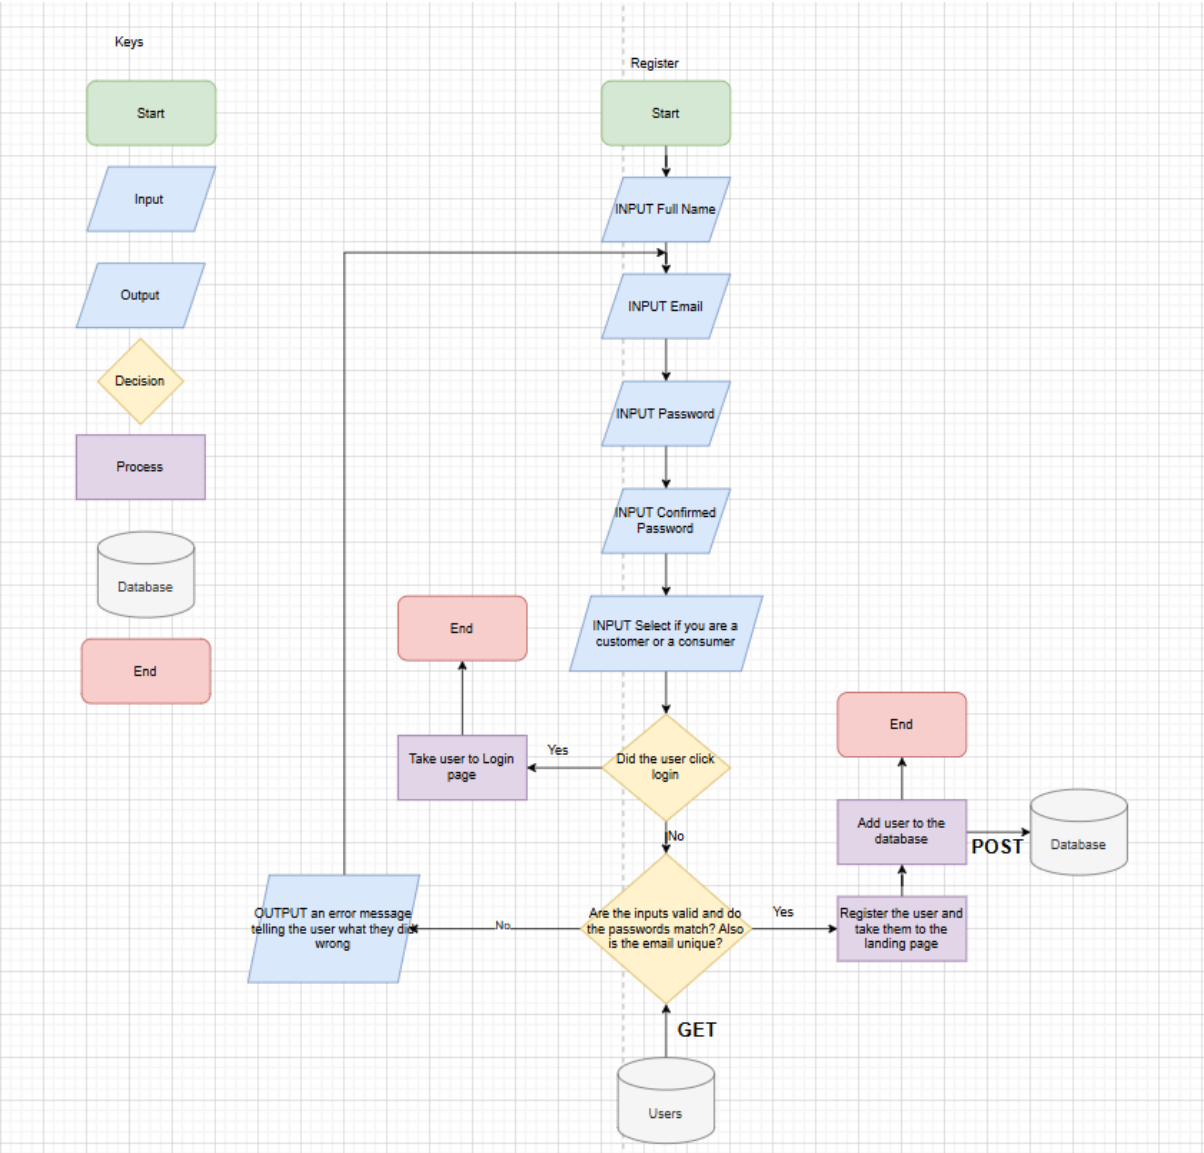
Algorithm Designs (Flowcharts):

Login Flowchart



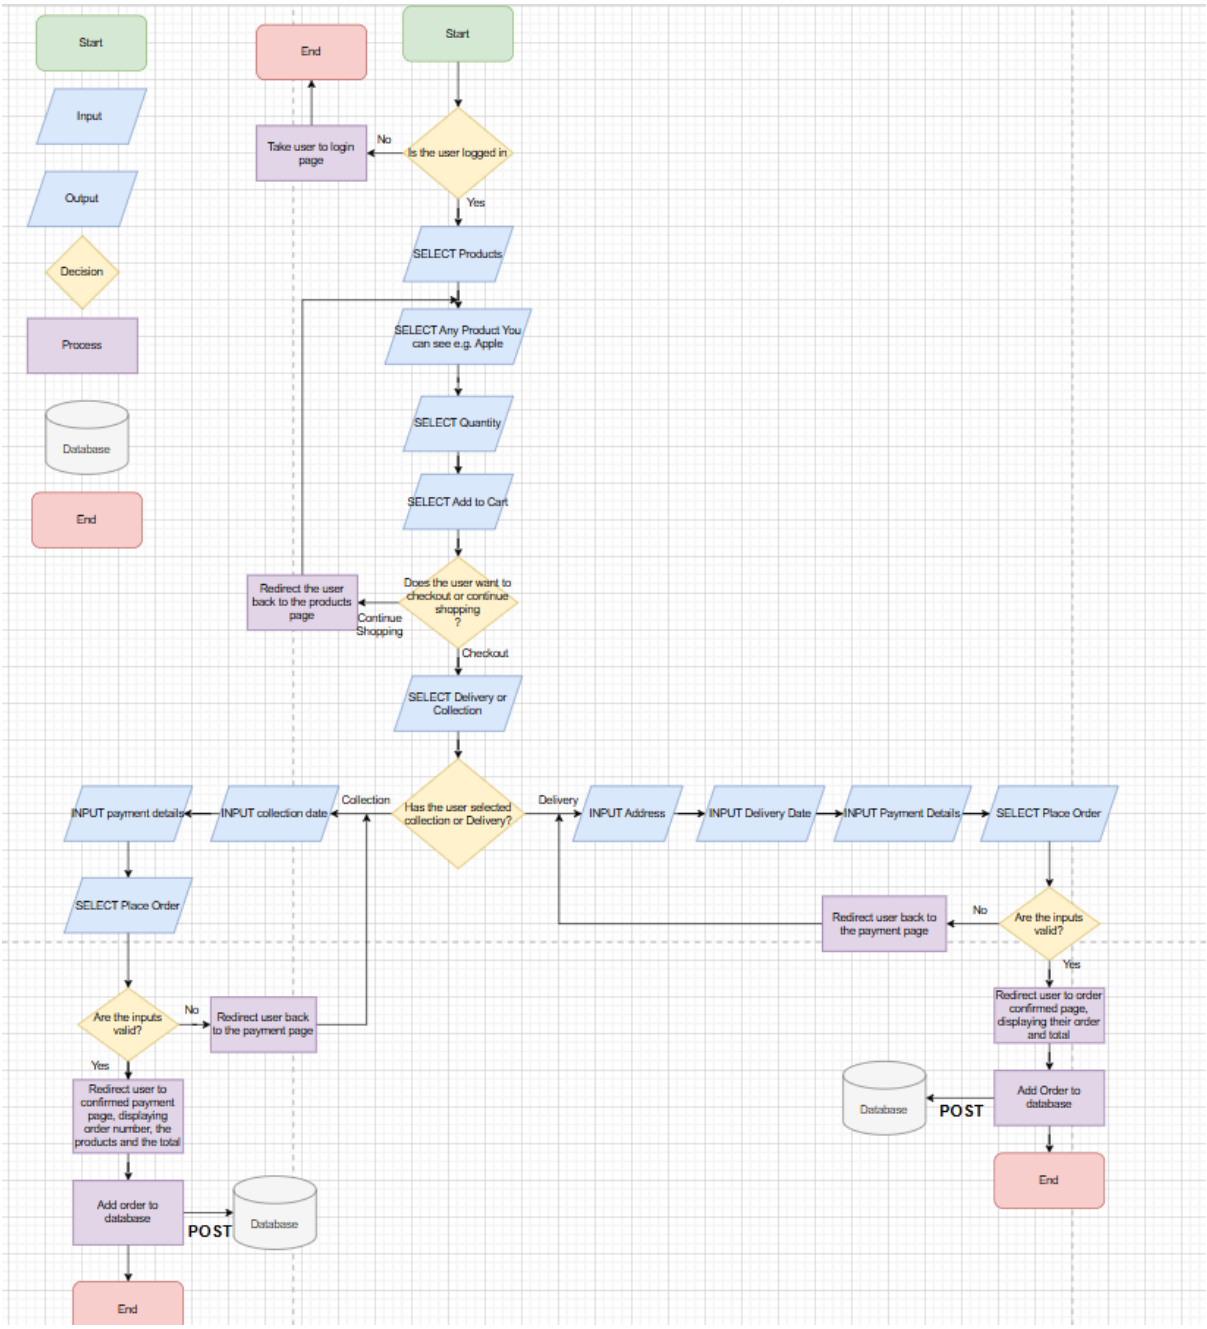
This process begins by entering their email and password, then the system checks whether or not the user has decided to click forgot password, and if they have they receive an email with further instructions, if they click register instead (if they are new users without any accounts), they get taken to the register page instead, and if the existing user comes back and enters their login details, the system checks whether or not if the password and email are correct by getting data from the database, if not they receive an error message telling the user they've got their details wrong, going all the way to the beginning where they have to enter the details all over again, but if they've entered the details correctly, the user gets redirected to the homepage.

Register Flowchart



This process begins with the user entering their full name, email, password, confirmed password and selecting whether or not they are a customer or a producer, and once they've done that the system checks whether or not they've clicked login, and once they have, they are redirected to the login page, however once they've clicked register, the system checks if the inputs are valid and if the passwords match, and if the email is unique, if not an error message is outputted, however if the requirements are met, the user gets registered and their information is posted to the database.

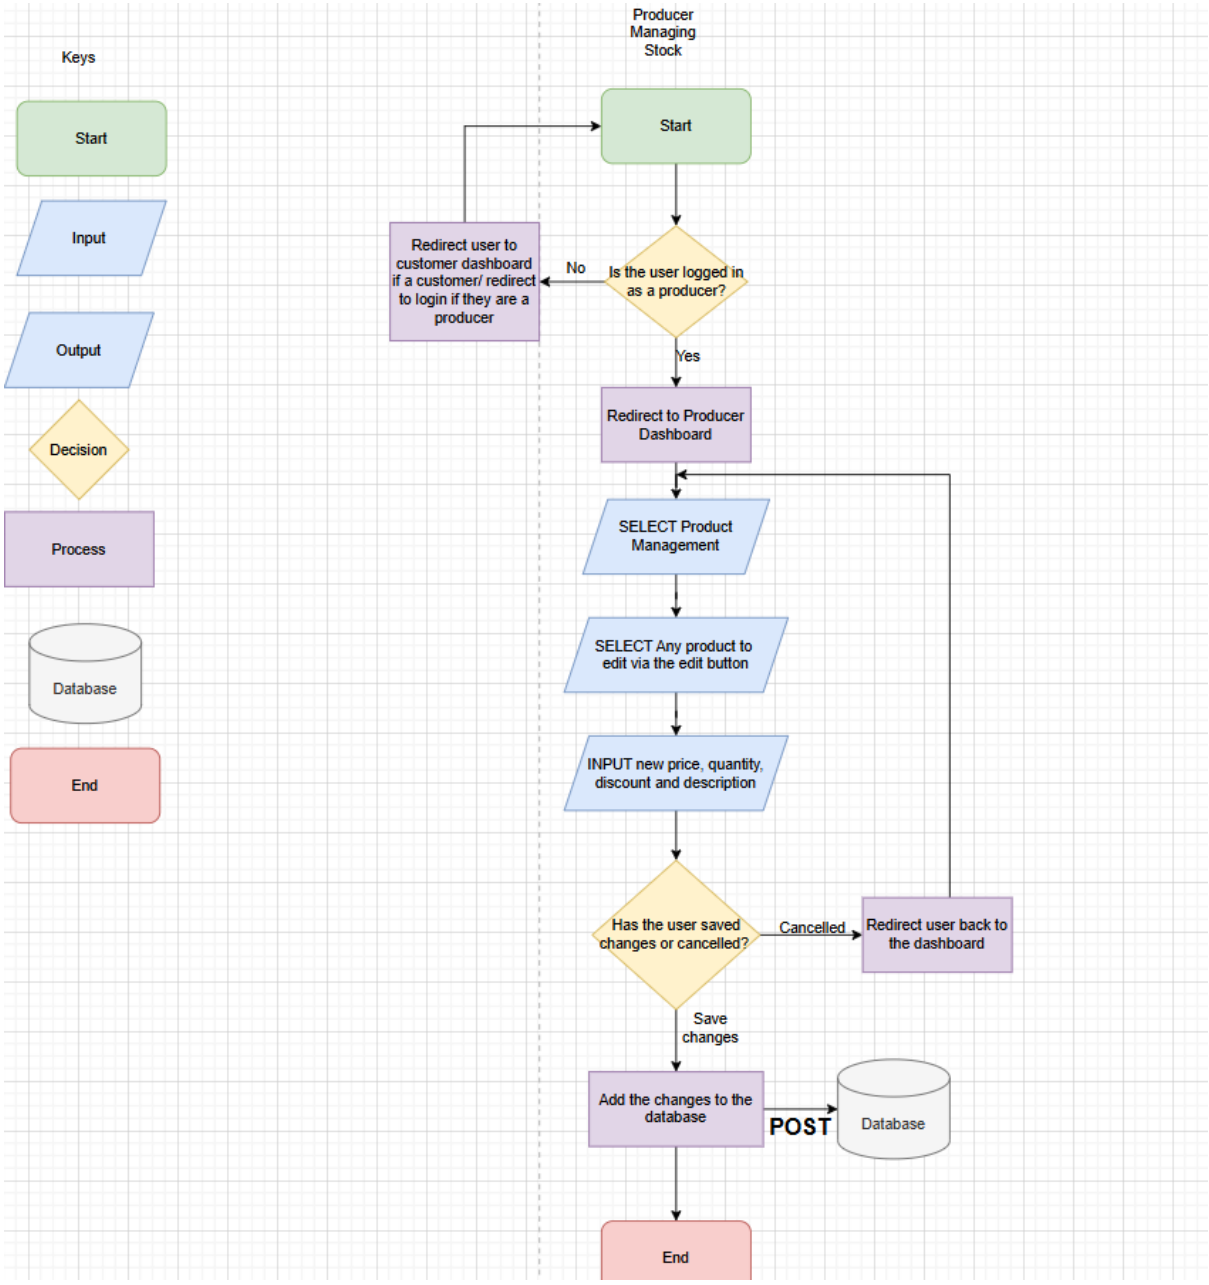
Placing an order Flowchart



This process begins with the system checking whether or not the user is successfully logged in, if not they are redirected to the login page, if they are, the user then selects the products from the navigation bar, then they would see products listed on the page from other producers, then from there they are able to select it, e.g. Apple, from there they can select the quantity they wish to have, then add to cart, from there the user is given a choice to either checkout or continue shopping to add more products to their cart, and if they choose continue shopping, they are taken back to the products page, where they can find more products to add to cart from producers, if not they are taken to the checkout, where they choose whether for the item to be delivered, or if you wish to collect, if collection is chosen, the user would enter the day they wish to collect, their payment details, then select place order, and from there the system checks if the inputs are valid details, such as checking if the card number is 16 digits long, if the cvv is 3 digits long etc. If it isn't, the user is

redirected back to the payments page, if it Is valid and the money has been successfully processed, the user is taken to a confirmation page, displaying their order number, the items they've ordered and the total in the bottom, it is then posted to the database and the process ends from there. However, if delivery was chosen, the user needs to input their address, the date they wish for their items to be delivered, their payment details and from there they select order, and again, the system checks if the payment details are valid credentials, if not they are redirected to the payments page, but if the moneys been processed and valid, the user is again taken to a payment confirmation page, showing their order number, their order and the total, it is then posted to the database from there and the process ends. Their order has been successfully placed.

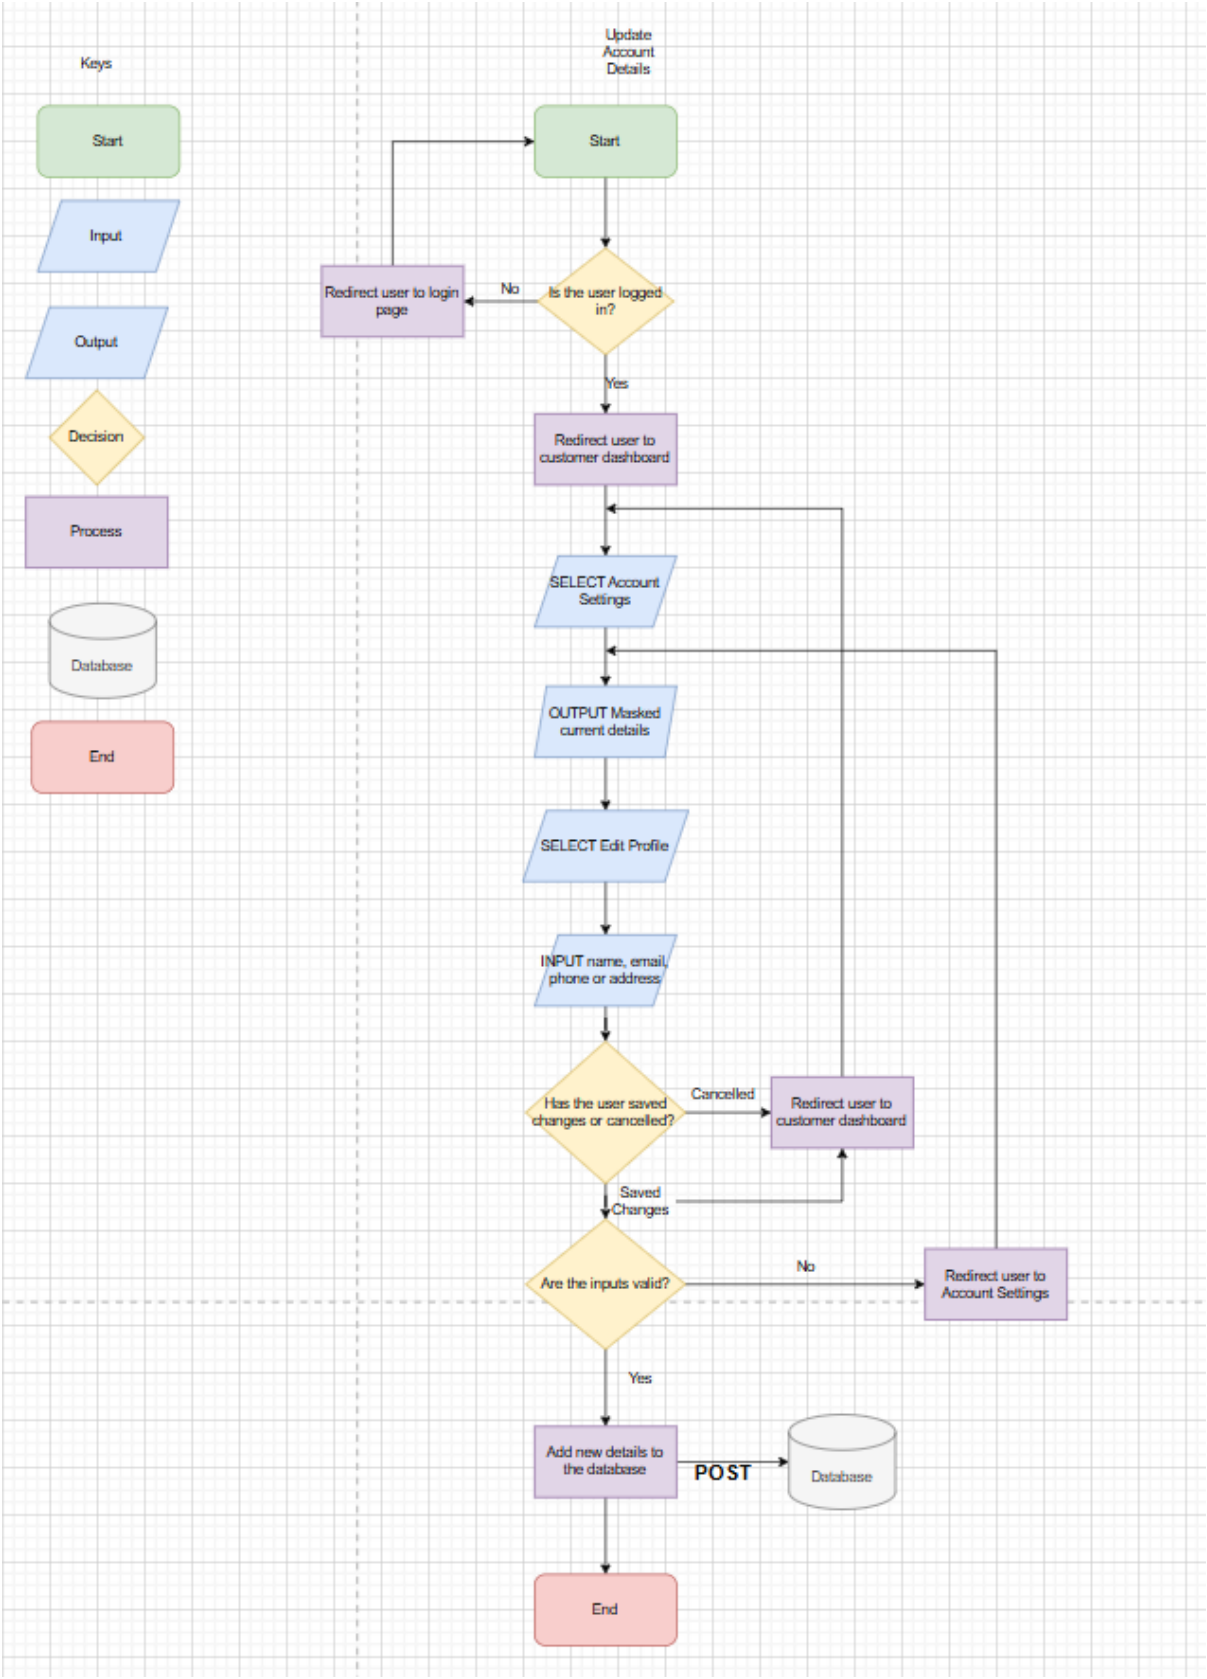
Producer Managing Stock Flowchart



The process begins by checking if the user is logged in a producer, if not they either get redirected to the customer dashboard, or redirected to login if they haven't logged in at all as a producer (If they are one), if they are they are redirected to the producer dashboard, from there they select product

management and they would be able to see the products they are selling, and if they want to manage their stock, they would edit their current listings to either increase their price, add more quantity to it, reduce the price etc. From there they edit the price, or whatever they wish to edit and then the system checks whether or not the user decided to save changes to their product listing or cancel any changes, if the changes are cancelled, they are redirected back to the producer dashboard, however if the changes have been saved, it is posted to the database and from there, the process ends.

Updating Account Details Flowchart



This process begins with checking whether or not the user is logged in, and if not, they are redirected to the login page, if they are logged, in they are taken to the customer dashboard, where they select account settings, outputting the current details but masked so if a third party were

looking at the screen they aren't able to login with your details as asterisks are used. From there they select edit profile, where they can edit their personal information, such as their name, email, phone number and address. And the system checks whether or not if the changes have been saved or cancelled, if it has been cancelled, the system redirects you back to the part where the system shows you the same details that are masked. But if the changes are saved, the system checks if the inputs are valid, if the inputs aren't valid, the user is redirected to the account settings, but if they are, the new details are posted to the database, and then the process comes to an end.

Test Strategy

Greenfield Local Hub

Date of Test	**Component to be Tested**	**Type of Test to be Carried out**	**Prerequisites and Dependencies**
14/04/2026	User Register System	White box testing, Black box testing, Functionality testing, Security testing, Integration Testing	The register function must be fully implemented. Migrations and database update must be applied. Controller logic must handle user registration and error handling for incorrect inputs, duplicate accounts and password complexity. Example Test Data: Normal: Name: "John Smith", Email: "test@testmail.com", Password: "Password123?", Confirm Password: "Password123?", Role: "Customer" Erroneous: Email: "falseemail" (must contain @ and domain e.g. .com), Password: "111" (too short, no capital, no symbol), Confirm Password: "abc" (does not match original password) Extreme: Email: "test@testmail.com", Password: "QwE12?" (exactly 8 characters, minimum length, includes 1 symbol)

Date of Test	Component to be Tested	Type of Test to be Carried out	Prerequisites and Dependencies
14/04/2026	User Log In System	White box testing, Black box testing, Functionality testing, Security testing, Integration Testing	The login page must be created and the migration and database update must be completed. There must be working controller logic. Testers must test valid/invalid credentials, session management and password encryption. Example Test Data: Normal: Email: "franklin@example.com", Password: "password123" Erroneous: Email: "falseemail" (must contain @ and domain), Password: "pass" (too short, missing capital and symbol) Extreme: Email: "franklin@example.com", Password: "QwE12?" (minimum valid password)
14/04/2026	Log Out Function	Black box testing, Functionality testing, Security testing, Session management testing	No test data required. The login system must be fully functional. The logout button must be clearly visible in the navigation bar when a user is logged in. Tester should click logout and verify the session is ended and the user is redirected.
14/04/2026	Login Button on the Navigation Bar	Black box testing, Functionality Testing, Integration Testing	No test data required. The login page and form should be created and fully functional. The tester should click the button to ensure it loads the login page correctly.
14/04/2026	Register Button on the Navigation Bar	Black box testing, Functionality	No test data required. The register page and form should be created and fully

Date of Test	Component to be Tested	Type of Test to be Carried out	Prerequisites and Dependencies
		Testing, Integration Testing	functional. The tester should click the button to ensure it loads the register page correctly.
14/04/2026	Logo on the Navigation Bar	Black box testing, Functionality Testing, Integration Testing	No test data needed. The home page must be created and fully functional. The tester should click the Greenfield Local Hub logo to ensure it takes the user to the home page.
14/04/2026	Home Link on the Navigation Bar	Black box testing, Functionality Testing, Integration Testing	No test data needed. The navbar should be completely functional and the home page must be created. The tester should click the link to ensure it takes the user to the home page.
14/04/2026	Products Link on the Navigation Bar	Black box testing, Functionality Testing, Integration Testing	No test data needed. The navbar should be completely functional and the products page must be created. The tester should click the link to ensure it takes the user to the products page.
14/04/2026	Producers Link on the Navigation Bar	Black box testing, Functionality Testing, Integration Testing	No test data needed. The navbar should be completely functional and the producers page must be created. The tester should click the link to ensure it takes the user to the producers page.
14/04/2026	Shopping Cart Icon on the Navigation Bar	Black box testing, Functionality Testing, Integration Testing	No test data needed. The navbar must be fully functional and the cart page must be created. The user must be logged in as a customer. The tester should click the cart icon and verify it loads the correct cart page and displays the badge count correctly.
14/04/2026	Accessibility Settings Button on the Navigation Bar	Black box testing, Functionality Testing	No test data needed. The navbar must be fully functional and the accessibility context must be implemented. The tester should click the settings icon to verify the accessibility dropdown opens and displays Dark Mode, Font Size and High Contrast options.

Date of Test	Component to be Tested	Type of Test to be Carried out	Prerequisites and Dependencies
14/04/2026	Dark Mode Toggle	Black box testing, Functionality Testing	No test data needed. The accessibility settings must be fully implemented and the AccessibilityContext must be created. The tester should click the Dark toggle and verify the site switches to a dark colour scheme across all pages.
14/04/2026	Font Size Selector (Small/Medium/Large)	Black box testing, Functionality Testing	No test data needed. The accessibility settings must be fully implemented. The tester should click each font size option (Small, Medium, Large) and verify the text size changes across the site accordingly.
14/04/2026	High Contrast Toggle	Black box testing, Functionality Testing	No test data needed. The accessibility settings must be fully implemented. The tester should toggle high contrast on and verify that colour contrast increases across the site for improved readability.
14/04/2026	Shop Now Button on the Home Page Hero Section	Black box testing, Functionality Testing, Integration Testing	No test data required. The home page must be fully functional and the products page must be created. The tester should click the button to ensure it takes the user to the products page.
14/04/2026	Meet Our Producers Button on the Home Page Hero Section	Black box testing, Functionality Testing, Integration Testing	No test data required. The home page and producers page must both be created and fully functional. The tester should click the button to ensure it takes the user to the producers page.
14/04/2026	Special Offers Product Cards on the Home Page	Black box testing, Functionality Testing, Integration Testing	No test data required. The home page and product detail pages must be created. Mock data must contain discounted products. The tester should click a product card to ensure it navigates to the correct product detail page.
14/04/2026	Create Your Account Button on the Home Page CTA Section	Black box testing, Functionality Testing,	No test data required. The home page and register page must be created and fully functional. The tester should click

Date of Test	Component to be Tested	Type of Test to be Carried out	Prerequisites and Dependencies
		Integration Testing	the button to verify it takes the user to the register page.
14/04/2026	Search Bar on the Products Page	Black box testing, White box testing, Functionality Testing	No test data required. The products page must be created and all products must be loaded from the data source. The tester should type a product name into the search bar and verify the product grid filters correctly in real time. Example Test Data: Normal: "Carrots" (should return Organic Carrots) Erroneous: "zzzzz" (should return 0 results) Extreme: "a" (single character, should return all products containing the letter a)
14/04/2026	Category Filter Dropdown on the Products Page	Black box testing, Functionality Testing	No test data required. The products page must be created. The tester should select each category (Vegetables, Dairy, Fruit, Pantry, Eggs) and verify the grid only shows products from that category.
14/04/2026	Producer Filter Dropdown on the Products Page	Black box testing, Functionality Testing	No test data required. The products page must be created with all producers in the dropdown. The tester should select each producer and verify only their products appear in the grid.
15/04/2026	Offers Only Checkbox on the Products Page	Black box testing, Functionality Testing	No test data required. The products page must be created and there must be products with discounts in the data. The tester should check the box and verify only discounted products with badges are shown.
15/04/2026	Product Card on the Products Page	Black box testing, Functionality Testing,	No test data required. The products page and product detail page must both be created. The tester should click a

Date of Test	Component to be Tested	Type of Test to be Carried out	Prerequisites and Dependencies
		Integration Testing	product card and verify it navigates to the correct product detail page showing the matching product name, price and description.
15/04/2026	Add to Cart Button on the Product Detail Page	Black box testing, White box testing, Functionality Testing, Integration Testing	The product detail page and cart functionality must be created. A customer user must be logged in. The tester should select a quantity and click Add to Cart, then navigate to the cart page to verify the item appears with the correct quantity and price.
15/04/2026	Quantity +/- Controls on the Product Detail Page	Black box testing, Functionality Testing	The product detail page must be created. The tester should click the + and - buttons and verify the quantity changes correctly and does not go below 1 or above the available stock level.
15/04/2026	View Full Profile Button on the Product Detail Page	Black box testing, Functionality Testing, Integration Testing	The product detail page and producer detail page must be created. The tester should click the button and verify it navigates to the correct producer profile page.
15/04/2026	Producer Card on the Producers Page	Black box testing, Functionality Testing, Integration Testing	The producers page and producer detail pages must be created. The tester should click a producer card and verify it navigates to the correct producer detail page showing the correct name, location, about us and farming methods.
15/04/2026	Product Cards on the Producer Detail Page	Black box testing, Functionality Testing, Integration Testing	The producer detail page and product detail pages must be created. The tester should click a product card on the producer detail page and verify it navigates to the correct product detail page.
15/04/2026	View All Products Button on the Producer Detail Page	Black box testing, Functionality Testing,	The producer detail page and products page must be created. The tester should

Date of Test	Component to be Tested	Type of Test to be Carried out	Prerequisites and Dependencies
		Integration Testing	click the button and verify it navigates to the main products page.
15/04/2026	Quantity +/- Controls on the Cart Page	Black box testing, Functionality Testing	The cart page must be created and cart functionality must be implemented. There must be at least one item in the cart. The tester should click + and - on a cart item and verify the quantity and line total update correctly.
15/04/2026	Remove Button on the Cart Page	Black box testing, Functionality Testing	The cart page must be created and cart functionality must be implemented. There must be at least one item in the cart. The tester should click Remove and verify the item is removed from the cart and the order summary total updates correctly.
15/04/2026	Proceed to Checkout Button on the Cart Page	Black box testing, Functionality Testing, Integration Testing	The cart page and checkout page must be created. There must be at least one item in the cart. The tester should click the button and verify it navigates to the checkout page.
15/04/2026	Continue Shopping Link on the Cart Page	Black box testing, Functionality Testing, Integration Testing	The cart page and products page must both be created. The tester should click the link and verify it takes the user back to the products page.
15/04/2026	Collection Option on the Checkout Page	Black box testing, Functionality Testing	The checkout page must be created and the delivery method toggle must be implemented. The tester should select Collection and verify the delivery address field is hidden, the delivery fee shows £0.00 and the date label changes to Collection Date.
15/04/2026	Home Delivery Option on the Checkout Page	Black box testing, Functionality Testing	The checkout page must be created and the delivery method toggle must be implemented. The tester should select Home Delivery and verify the delivery address field appears, the delivery fee

Date of Test	Component to be Tested	Type of Test to be Carried out	Prerequisites and Dependencies
			shows £3.50 and the total updates accordingly.
15/04/2026	Delivery Address Field on the Checkout Page	Black box testing, Functionality Testing	The checkout page must be created and Home Delivery must be selected. The tester should leave the field blank and attempt to place an order to verify validation prevents submission without an address.
15/04/2026	Scheduled Date Picker on the Checkout Page	Black box testing, White box testing, Functionality Testing	The checkout page must be created. The tester should attempt to select a past date and verify it is blocked. They should then select a future date and verify it is accepted. Example Test Data: Normal: A valid future date e.g. 25/04/2025 Erroneous: A past date e.g. 01/01/2020 (should be blocked) Extreme: Today's date (should be blocked as the minimum is tomorrow)
15/04/2026	Payment Details Form on the Checkout Page	Black box testing, White box testing, Functionality Testing, Security Testing	The checkout page must be created and the payment form must be implemented. The tester should submit the form with missing or invalid fields and verify appropriate error handling occurs. Example Test Data: Normal: Cardholder Name: "John Smith", Card Number: "4111111111111111", Expiry: "12/26", CVV: "123"

Date of Test	Component to be Tested	Type of Test to be Carried out	Prerequisites and Dependencies
			Erroneous: Card Number: "abc" (must be numeric), CVV: "ab" (must be 3 digits), Expiry: "00/00" (invalid date) Extreme: Card Number with exactly 16 digits (boundary)
15/04/2026	Place Order Button on the Checkout Page	Black box testing, White box testing, Functionality Testing, Integration Testing	The checkout page, order confirmation page and order context must all be created and functional. A logged in customer must have items in their cart. The tester should complete all fields correctly and click Place Order, then verify they are redirected to the order confirmation page with the correct order details displayed.
15/04/2026	View Order History Button on the Order Confirmation Page	Black box testing, Functionality Testing, Integration Testing	The order confirmation page and customer dashboard must be created. The tester should click the button and verify it navigates to the customer dashboard orders tab showing the newly placed order.
15/04/2026	Continue Shopping Button on the Order Confirmation Page	Black box testing, Functionality Testing, Integration Testing	The order confirmation page and products page must be created. The tester should click the button and verify it navigates back to the products page.
15/04/2026	Order History Tab on the Customer Dashboard	Black box testing, Functionality Testing, Integration Testing	The customer dashboard must be created and a customer must be logged in with at least one order placed. The tester should click the Order History tab and verify all orders are displayed with the correct status, date, items and total.

Date of Test	Component to be Tested	Type of Test to be Carried out	Prerequisites and Dependencies
15/04/2026	Account Settings Tab on the Customer Dashboard	Black box testing, Functionality Testing	The customer dashboard must be created and a customer must be logged in. The tester should click the Account Settings tab and verify masked personal details (email, phone, password) are displayed correctly.
15/04/2026	Edit Profile Button on the Customer Dashboard	Black box testing, White box testing, Functionality Testing, Integration Testing	The customer dashboard and account update functionality must be created. The tester should click Edit Profile and update the name, phone and address fields, then save and verify the changes are reflected. Example Test Data: Normal: Name: "Franklin Smith", Phone: "07700900000", Address: "123 Main Street, Greenfield" Erroneous: Phone: "notanumber" (must be valid numeric format) Extreme: Name with maximum allowed characters
15/04/2026	Cancel Button on the Customer Dashboard Edit Form	Black box testing, Functionality Testing	The customer dashboard edit form must be created. The tester should click Edit Profile, make changes to the fields and then click Cancel and verify the original data is restored and no changes were saved.
15/04/2026	Product Management Tab on the Producer Dashboard	Black box testing, Functionality Testing,	The producer dashboard must be created and a producer must be logged in. The tester should click the Product

Date of Test	Component to be Tested	Type of Test to be Carried out	Prerequisites and Dependencies
		Integration Testing	Management tab and verify all of their products are listed with the correct name, price, stock and discount badge where applicable.
15/04/2026	Edit Button on the Producer Dashboard Product List	Black box testing, White box testing, Functionality Testing, Integration Testing	The producer dashboard must be created and a producer must be logged in. The tester should click Edit on a product and verify the inline edit form opens with the current price, stock, discount and description pre-filled. Example Test Data: Normal: Price: "3.50", Stock: "40", Discount: "10", Description: "Updated description" Erroneous: Price: "free" (must be a number greater than 0), Stock: "-5" (must be 0 or greater) Extreme: Discount: "100" (boundary value, 100% off)
15/04/2026	Save Button on the Producer Dashboard Edit Form	Black box testing, Functionality Testing, Integration Testing	The producer dashboard edit form must be created. The tester should edit a product and click Save, then verify the updated values are reflected in the product list and on the products page.
15/04/2026	Cancel Button on the Producer Dashboard Edit Form	Black box testing, Functionality Testing	The producer dashboard edit form must be created. The tester should click Edit, change values and then click Cancel and verify the original values are restored and no changes were saved.

Date of Test	Component to be Tested	Type of Test to be Carried out	Prerequisites and Dependencies
15/04/2026	Orders Tab on the Producer Dashboard	Black box testing, Functionality Testing, Integration Testing	The producer dashboard must be created, a producer must be logged in and there must be at least one order containing their products.
